About us

The entire premise behind crypto currencies and blockchain technology was to create a universal, democratic system where everyone can participate without any restrictions. Decentralization ensures that no single person or an entity is entitled to control the ecosystem and from one side we see and accept the progressive role of digital technologies in the modern world. From the other side we understand not everyone has access to it, looking into this we decided to develop a unique ecosystem for everyone where a normal person can take the advantage of this digitization to make his life better. TRIMBEX is a project to build an integrated infrastructure based on ecosystem resources and will gradually open to the blockchain industry. TRIMBEX is committed to being the birthplace of innovative technologies and innovative businesses, building a complete ecosystem of technology development

What is Polygon Blockchain?

Polygon is a “layer two” or “sidechain” scaling solution that runs alongside the Ethereum blockchain — allowing for speedy transactions and low fees. MATIC is the network’s native cryptocurrency, which is used for fees, staking, and more. You can buy or sell MATIC via exchanges like Coinbase. Polygon, which is a “Layer 2” scaling solution (or “sidechain”) that’s emerged to provide faster transactions and lower costs for users. It acts as a speedy parallel blockchain running alongside the main Ethereum blockchain. To use it, you can “bridge” some of your crypto over to Polygon, and then interact with a wide range of popular crypto apps that were once exclusive to the main Ethereum blockchain. Currently, Ethereum can process 14 transactions per second (TPS)—while Polygon achieves speeds of up to 7,000 TPS. This makes everything built on the blockchain much cheaper and quicker, like an HOV lane on the highway. In the near future, experts anticipate that Ethereum will accelerate its TPS after its long-anticipated network upgrade in September 2022. But even after the Merge, Polygon’s lower fees should still attract developers and help the crypto maintain its narrative.

Metaverse

KEY FEATURES

○ BORDERLESS

Cryptocurrency is making waves in the advocacy for decentralization within the financial industry providing solutions for cross-border transactions and transparent, immutable data via blockchain technology

○ TRANSPARENCY

One of the best features of L2 blockchain is its transparency. It means that **it is entirely traceable and much easier to maintain**, and one of the areas where blockchain technology shows its transparency is through Bitcoin casino sites

○ TRUSTLESS

Trustless "means that you don't have to trust a third party , a bank, a person , or any intermediary that could operate between you and your cryptocurrency transactions or holdings.
